

A high speed broadband data solution capable of symmetrical download and upload speeds of up to 2 Mbps (subject to distance limitations and options purchased) with up to 14 phone lines.

As one of the fastest growing telecommunications providers, Datavo offers complete data and voice solutions for small and medium-sized businesses. Our customized packages were designed to deliver the high level of services previously available only to big businesses with a complex phone system.

We own and operate our network, equipment, and switching facilities, which eliminates the high cost often associated with resold network and services.

No Risk, Guaranteed. We're confident in our service offerings. Datavo offers a 60-day no hassle guarantee. If you're not satisfied with our services within the first 30 days starting from your installation day, we will gladly release you from any contractual agreement with no questions asked.

Seamless Conversion. You will keep all the same phone numbers and features you have today. The only changes you will notice are the lower cost, higher Internet speed, and better overall service.

Affordable Pricing. You pay one affordable price for all the voice and data services you need - all on one easy to understand bill, one number to call for answers.

“Datavo was able to meet our needs where no other company could. By utilizing their DV FLEX product we were able to have 13 outbound business lines and an incredible symmetrical speed of 3 Mbps for our Internet access. No other phone company could provide these services at such a reasonable cost. - DIAL TELECOM, LLC”

DATAVO FACTS

- Privately owned corporation based in Los Angeles, California.
- Parent company, Pacific Centrex Services, was founded in 1996.
- \$36 M in annual revenues.
- Over 50,000 active phone lines.
- Serving over 170 central offices throughout California.
- Full array of voice and data services delivered on it's own network facilities and equipment.
- Unparallel customer service.

DV FLEX

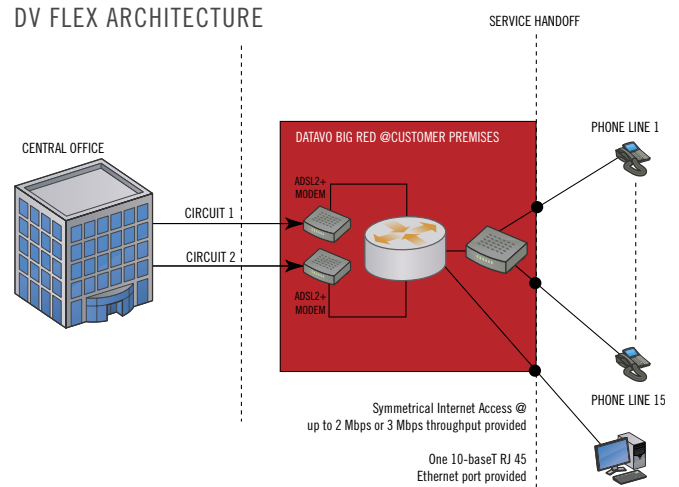

DV Flex was designed with reliability in mind. Its services are provided over two broadband circuits, ensuring services are only partially affected in the event of a single circuit or power failure - a reliability not available even in more expensive access services, including T1s.

DV Flex is provided over the latest state-of-the-art technology platform. We deploy Quality of Service over our network to ensure that voice calls are always the priority.

Voice services are provided over a dedicated access network - not over the Internet - and are digitally for best voice quality. Since voice calls are transported over a dedicated network and not over the Internet, calls are safe from potential tampering. Additionally, calls are not subject to the impairment normally associated with simultaneous data transmission, allowing all lines to be used for voice, fax, or data transmission.

Datavo maintains a dedicated network connecting to 911 centers in all geographical locations in which it provides services. As a result, customers have access to 911 services at all times.

DV FLEX ARCHITECTURE
