

## myDatavo Assistant

*A robust, Windows software to manage your calls*

It's time for your business to take advantage of existing technologies and get the most out of the latest in unified communications. myDatavo Assistant is a Windows based tool that will enhance the way you use your business telephone today.

A lightweight application toolbar, myDatavo Assistant is designed to complement your myDatavo Web Portal interface. Automatic notifications and instant access to frequently used calling features make it a valuable tool for keeping you connected.

### High Function Toolbar

myDatavo Assistant greatly enhances the way you use your business telephone by providing easy access to your communication tools directly from your Windows desktop. Now you can access Datavo's most advanced services from your computer without having to touch your desk phone. The intuitive toolbar application allows you to:

- search your myDatavo contact list
- initiate and configure synchronization with Outlook contacts

### Find Out More!

- search contacts in an external LDAP directory
- initiate click-to-dial outgoing calls
- enable/disable key call services.

This integrated approach even provides extensions that allow you to initiate click-to-dial outgoing calls directly from Microsoft Outlook.

## Integrated Incoming Call Notification

The myDatavo Assistant Notifier maintains contact with your myDatavo Web Portal and will alert you whenever you have an incoming call or receive a new voicemail with a pop-up notification called a “toast.” The toast displays the name of the caller (pulled automatically from the your myDatavo contact lists), their number and the time of the message. In addition, when you receive an incoming call, the notifier provides options to send the call to voicemail or forward it to another line, instantly. Residing in the Windows system tray, it offers a notification area icon that shows voicemail status and provides a shortcut to myDatavo.

## Instantly Change Status

myDatavo Assistant allows you to easily change your status in much the same way you're already used to doing through your instant message clients. A simple point and click allows you to select

- Ring My Phone – deactivates any other service that might be in effect
- Do Not Disturb – activates the Do Not Disturb (DND) feature
- Forward Calls – to the previous five numbers used for forwarding or to a different number they can input
- Find Me Follow Me – delivers granular control over advanced call routing functionality.

myDatavo Assistant can also leverage rules from Call Manager™, a myDatavo service that offers even greater control over how you receive calls.
