

DSL Broadband

Working to prepare your company for success.

An ADSL2+ Product

Start saving your business money with a cost effective DSL broadband solution from Datavo.

Our high speed DSL offers small business customers with 2 to 5 employees faster, more reliable download speeds than most competitors. Our DSL solution is perfect for any business currently using dial-up internet access or slow speed DSL and are looking for a better, higher speed solution while reducing their overall communications bill.

The Datavo DSL Broadband product is provided over the latest, technology platform. The components comprising our broadband data services are deployed using ADSL2+ technology, raising the bar on achievable speed.

The same line used to deliver DSL service can also be used for making telephone calls. All Datavo voice services are provided over a dedicated access network, not over the internet, and are digitally uncompressed ensuring the best possible voice quality. Since voice calls are transported over a dedicated network and not over the internet your lines are more protected from potential tampering. Additionally, calls over your DSL line are not subject to voice impairment associated with other carriers and all lines may be used for voice or fax and may be connected to any other device in your business that requires a telephone line.

Product Description:

Datavo DSL Broadband provides customers with a high speed broadband data solution capable of download speeds up to 5Mb. The service is delivered over a ClearAccess SR300N modem that provides 4 ethernet ports and wireless connectivity. Datavo is also able to provide single static IPs and subnets if required.

Performance:

Datavo DSL is a great choice when connecting multiple internet devices. We ensure you have sufficient download and upload speed for sending and receiving emails, streaming movies, listening to online music and downloading files.

Datavo DSL will ensure you are able to use all of your internet connected devices simultaneously. You can easily stream your movies, music and experience all the World Wide Web has to offer.
